DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

The PTOL 1449 has been received, reviewed and considered.

Claim Rejections - 35 USC § 112

2. Claims 3 and 6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 3, line 2, the terminology "...ribbon-like..." is being considered vague and indefinite.

In claim 6, line 1, the terminology "...ribbon-like..." is being considered vague and indefinite.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by the Tanda, et al reference (A Mobius strip of single crystals, Nature, 23, May 202, Volume. 417, pages 397 – 398).

Art Unit: 1722

Tanda, et al teaches a mobius strip produced by twisting a ribbon of material through 180° and joining its ends, resulting in a distinct one-side topology. The crystalline ribbon is formed by a compound of niobium and selenium NbSe. Its crystals are synthesized by chemical-vapor transport and assume fibrocrystalline ribbon and whisker shapes. The figure- of-eight crystal strips arise as a result of either double encircling or double twisting. According to White's theorem a doubly encircling loop is topologically equivalent to a 2 twisted loop, which is analogous to a ring conformer of DNA. The Tanada, et al referece also teaches a new growth technique for topological crystals by using a spherical droplet as a spool using tantalum compounds with selenium and sulphur (TaSe₃ and TaS₃) (See entire document).

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTOL-892.
